Projeto das paredes em alvenaria armada

Empuxos

Admite-se que os eixos mais críticos
é o reservatório cheio sem ventos

Esbelteza

$$\lambda = \frac{h_e}{t_e} = \frac{2 \cdot 120}{14} = 17,1 < 24 \quad \text{OK!}$$

para alvenaria armada e não armada

Modelo estrutural com ações constituintes

Soluitões:

$$V_K = 12 \cdot 1,2 / 2 = 7,2 \text{ kN/m}$$

$$M_K = 7,2 \cdot 1,20 / 3 = 2,88 \text{ kN m/m}$$

Dimensionamento à flexão

Aberturas arredondadas e eixos simétricos

Flexão vertical

$$M_{sd} = 1,4 \cdot 2,88 = 4,032 \text{ kN m/m} = 403,2 \text{ kN cm/m}$$

$$f_{pk, h_0} = 0,6 / 0,48 = 1,25 \text{ kN/cm}^2$$

$$s = 14 - 5 = 9 \text{ cm}$$

$$K = 1,0$$

$$b_m = 15 \text{ cm}$$

$$b_m = 30 \text{ cm}$$

$$b_m = 45 \text{ cm}$$

$$\phi 6,3 \text{ c/15 cm}$$

$$\phi 8 \text{ c/30 cm}$$

$$\phi 10 \text{ c/45 cm}$$

Armadura horizontal

Cálculo para tração simples

$$F_t = 1,40 \cdot 1,4 \text{ kg } 30' \cdot 7 = 3,96 \text{ kN}$$

A diagram of a rectangular field. The left vertical side is labeled with a blue double-headed arrow and the text "140 m". The bottom corners of the rectangle have two red lines drawn from the corners to the top side, forming two right-angled triangles. Each of these triangles has an angle of 30° marked at the bottom corner.

$$A_s = \frac{F_{td}}{f_{yd}} = \frac{1.4396}{43,48} = 0,13 \text{ m}^2$$

2010 construction

Alga de borda

$$M_d = 1,4 \cdot 5,35 = 7,49 \text{ KNm/m} = 749 \text{ KNcm/m}$$

$$A_{S, \min} = \frac{0,15}{100} \cdot 100 \cdot 14 = 2,10 \text{ cm}^2/\text{m}$$

$\phi 6,3 \text{ c} / 15 \text{ mm}$

Dimensionada para o momento fletor devido ao empuxo do solo

$$M_K = \frac{10,62 \cdot 1,475}{2} \cdot \frac{1,475}{3} = 3,85 \text{ kN/m/m}$$

$$M_d = 1,4 \cdot 3,85 = 5,39 \text{ KNm/m} = 539 \text{ KNcm/m}$$

$$A_s = 1,20 \text{ cm}^2/\text{m}$$
$$A_{s, \min} = 2.26 \text{ cm}^2/\text{m}$$

$\phi 6,3 \text{ c} / 12,5 \text{ mm}$

Diminuída por flexões

Dimensionada para flexão - torção

Momentos fletor: devido aos momentos fletor dos pilares com restrições cheias e devido à reação dos solos menos o peso da água e o peso da laje de fundo.

Torção: devido às forças horizontais nas paredes

Modelo estrutural com ações características

$$M_{Bx} = M_{By} = 5,35 \text{ kN/m/m}$$

$$f_k = \frac{(0,60 \cdot 0,14 \cdot 25 + 0,80 \cdot 270) (2 \cdot 2,55 + 2 \cdot 4,35)}{2,55 \cdot 4,35} = 5,30 \text{ kN/m}^2$$

$$l_x = 2,55 \text{ m}$$

$$l_y = 4,35 \text{ m}$$

$$\frac{4,35}{2,55} = 1,70 < 2 \rightarrow \text{laje bidimensional}$$

Solentões:

Devido aos momentos nas bordas

$$l_x/l_y = 0,586$$

$$\alpha_x = 0,2518$$

$$\alpha_y = 0,1607$$

$$\alpha_x' = 0,0862$$

$$\alpha_y' = -0,004$$

$$M_x = 2(0,2518 \cdot 5,35 + 0,0862 \cdot 5,35) = 3,62 \text{ kN/m/m}$$

$$M_y = 2(0,1607 \cdot 5,35 - 0,004 \cdot 5,35) = 1,68 \text{ kN/m/m}$$

Devido ao peso das paredes

Leiras dos grelhos sobre apoios rígidos

$$l_x = 2,55 \text{ m}$$

$$l_y = 4,35 \text{ m}$$

Carga 1

$$f_k = 5,30 \text{ kN/m}^2$$

$$M_x = 3,85 \text{ kN/m/m}$$

$$M_y = 1,32 \text{ kN/m/m}$$

Momentos fletor característicos

$$M_x = 3,85 + 3,62 = 7,47 \text{ kN/m/m}$$

$$M_y = 1,32 + 1,68 = 3,01 \text{ kN/m/m}$$

Torção

$$N_k = \frac{1,4 \cdot 1,0 \cdot 1,4}{2} = 9,8 \text{ kN/m}$$

Dimensionamento à flexão - torção

Direção x:

Direção x:

$$M_x = 1,4 \cdot 7,47 = 10,46 \text{ kNm/m} = 1046 \text{ Nmm/m}$$

$$N_x = 1,4 \cdot 9,8 = 13,72 \text{ kN/m}$$

$$d = 10,5 \text{ cm}$$

$$A_s = 2,59 \text{ cm}^2/\text{m} \quad \phi 6,3 \text{ c/12 cm}$$

$$d' = 4,5 \text{ cm}$$

Direção y:

$$M_y = 1,4 \cdot 3,01 = 4,21 \text{ kNm/m} = 421 \text{ Nmm/m}$$

$$N_y = 13,72 \text{ kN/m}$$

$$A_s = 2,25 \text{ cm}^2/\text{m} \quad \phi 6,3 \text{ c/12 cm}$$
